

Is the Distraction coming from...inside the car?

Vehicle touchscreens may be advanced, but they can still cause distractions.

Your vehicle's touchscreen takes your eyes off the road...

Your hands off the wheel...

And your mind off of driving.

Adjust your touchscreen while you're still parked. Need to make changes? Ask a passenger for help or pull over safely.

For professional drivers, this includes dispatching devices and mobile data terminals.

Any distraction behind the wheel is dangerous for everyone.

Just Drive.
